

Integrations

Mosyle supports integration with Apple School Manager and Active Directory to import students, teachers, staff, grade levels, and classes. If the school data is not available in ASM or Active Directory, it can be created manually within the web panel, or in bulk using the Spreadsheet import or API integration.

When importing users, it's important to ensure the correct email address and user ID is imported in Mosyle. If app and book deployment using user-based license assignment will be used, or User Enrollment will be used, it's important to also import the user's Managed Apple ID.
